

SHOEBOX for Hearing Services

A Mobile Solution for Out-of-the-Booth Testing and Lead Generation

Advanced diagnostic capabilities, state-of-the-art lead generation, and cloud-based data management packed into one portable, easy-to-use solution.

SHOEBOX for Hearing Services is:

- ✓ Simple, self-administered screening
- ✓ Pure tone: air & bone with masking
- ✓ SRT/SDT testing
- ✓ Embedded inventory, surveys, or custom questionnaires
- ✓ Threshold tests automatically sent to Noah® 4
- ✓ Secure reporting and export using a HIPAA-compliant cloud portal

SHOEBOX for Hearing Services is for the clinic owner ready to grow their business. We know it can be a challenge to attract new, qualified patients and prioritize appointment booking based on their hearing level. And we know that you probably wish to offer additional services outside of your clinic. If so, we can help. Both with increasing foot traffic, and out-of-the-booth testing.

We are offering a bundled solution of SHOEBOX QuickTest plus SHOEBOX Audiometry Pro Edition. This highly portable, powerful combination of products offers two testing functions on a single platform—simple self-administered screening, and diagnostic threshold test using a modified Hughson-Westlake protocol.

When required for lead generation, SHOEBOX QuickTest can be set up in both attended and unattended kiosk mode at health fairs, in retail locations, waiting rooms, optometry offices, or almost any setting where your potential clients may gather. This quick, self-administered hearing screening check enables you to engage with potential new customers in a fun and informative way.

When you need to perform threshold seeking tests, SHOEBOX Audiometry Pro offers a full range of audiometric capabilities including air and bone conduction with masking, speech reception threshold testing (SRT), speech discrimination testing, extended high frequency (EHF) testing, and sound generation ranging from -10dB to 120dB.

Results automatically sync to a cloud-based portal to help you quickly and easily identify good candidates for follow-up appointments, while audiometric threshold results can be sent directly to Noah[®] 4.

This combination of SHOEBOX QuickTest plus SHOEBOX Audiometry Pro Edition is most often the system of choice for mobile clinicians looking to augment traditional tools and approaches for greater mobility.
